SUMMARY

Technical Product Analyst and Computer Science graduate with banking, fintech, AI/ML, and enterprise workflow experience across customer discovery, competitive benchmarking, requirements definition, backlog refinement, and stakeholder readouts. Led SMB digital banking discovery at Frost Bank, synthesizing insights from 13+ competitor banks and customer interviews into journey maps, user stories, acceptance criteria, and evidence-based product recommendations in Agile/Scrum. Strongest at translating ambiguous customer signals into structured product requirements for complex regulated platforms.

SKILLS

Product & Business Analysis: Requirements Definition, User Stories, Acceptance Criteria, Backlog Refinement, Product Roadmap, Agile/Scrum, Sprint Planning, Customer Discovery, Workflow Analysis, Gap Analysis, Competitive Benchmarking
Research & Synthesis: User Interviews, Discussion Guides, Participant Screeners, Journey Mapping, Affinity Mapping, Persona Mapping, Stakeholder Readouts, Insight Matrices, Findings Reports
Tools & Technical: SQL, Python, JavaScript, HTML/CSS, Figma, Miro, Jira, Confluence, Notion, Tableau, REST APIs, Git/GitHub, React Native

EXPERIENCE

Frost Bank

UX Research & Product Strategy Intern

San Antonio, TX
March 2025 – Present

- Led SMB digital banking product discovery across 13+ competitor banks, translating competitive benchmarking, stakeholder interviews, and 12+ customer sessions into journey maps, insight matrices, and evidence-based product recommendations adopted into the team's backlog.
- Defined workflow-based onboarding and platform-fit product opportunities by synthesizing customer discovery on SMB owner decision-making, surfacing 4 prioritized friction points that informed future-state user flows and feature requirements.
- Wrote user stories, acceptance criteria, and product requirements grounded in research evidence; contributed to backlog refinement and sprint planning in an Agile/Scrum environment alongside product, UX, and engineering teams.
- Delivered structured research readouts to product, UX, and business banking stakeholders, translating raw interview signals into actionable product direction and connecting findings to measurable onboarding and platform-adoption outcomes.
- Developed discussion guides, participant screeners, and research protocols for moderated remote sessions with SMB owners and financial decision-makers, structuring discovery around behavior-based prompts and workflow-specific probes.

National Science Foundation (NSF S-STEM)

UX Designer & Researcher, Inverte-Quest

San Antonio, TX
Aug 2024 – Present

- Defined MVP product requirements for an AI-assisted invertebrate identification tool by mapping workflows across 3 distinct user types (students, teachers, field researchers), identifying field usability constraints, image capture needs, and AI confidence communication gaps.
- Conducted persona mapping, workflow analysis, competitive audit, and requirements definition to specify how users would trust, interpret, correct, and log AI-assisted results in constrained outdoor and classroom environments.

Texas A&M University–San Antonio Honors Program

Honors Scholar Research Assistant, Potr-Aid

San Antonio, TX
Sept 2024 – May 2025

- Evaluated an AI-assisted photography product across 60,000+ images using precision, recall, F1, and failure-pattern analysis; translated quantitative model behavior into trust-calibration and confidence-interface product recommendations for a published research paper.

PROJECTS

Promising Products – HackUTD Winner

Product Recommendation Experience

- Won HackUTD by analyzing 150,000+ customer records to identify behavior-based product recommendation opportunities; defined product logic, built user flows, and presented design concepts judged best-in-show by industry judges.

Banking Analytics Dashboard

SQL + Product Analytics Case Study

- Built a SQL-based analysis of a public financial dataset to surface customer activation and retention patterns; created a Tableau dashboard and a one-page product analyst readout with 3 prioritized A/B test hypotheses.

EDUCATION

Texas A&M University–San Antonio

Bachelor of Science in Computer Science; GPA: 3.52

San Antonio, TX
May 2026

- Certificates: Artificial Intelligence, Cyber Security, Mobile Computing
